

Research Assignment - Module 01 Kostel Novela

1) Business Analytics

Business analytics is the process of using data, tools and techniques to support better business decisions.

It focuses on improving performance and to solve the business problems.

Example - A company analyzes sales trends to decide which products to promote.

2) Data Analytics

Data analytics involves examining raw data to identify patterns, trends and insights.

It focuses more on analyzing data than applying it to business decisions.

Example - Analyzing customer data to find common buying patterns.

3) Business Intelligence

BI refers to tools and systems that display data through reports and dashboards.

It mainly focuses on tracking past and current performance.

Example - A dashboard showing daily revenue and customer numbers.

4) Data-Driven Decision Making

This is the practise of making decisions based on data rather than intuition and guesswork.

Example - Choosing a marketing strategy based on customer behaviour data.

5) Big Data

Big data refers to extremely large and complex datasets that are difficult to manage using traditional tools.

It includes high volume, speed and variety.

Example - Streaming platforms analyzing millions of user interactions.

6) Descriptive Analytics

Descriptive analytics explains what has already happened using historical data.

Accessing data from the past.

Example - A report showing last month's sales performance.

7) Diagnostic Analytics

Diagnostic analytics focuses on understanding why something happened by analyzing data relationships.

Analyzing data patterns that determine why a particular thing happened.

Example - Investigating why sales dropped in certain region.

8) Predictive Analytics

Predictive analytics uses data and models to forecast future outcomes.

Analyzing data and assuming what is about to happen.

9) Prescriptive Analytics

Prescriptive analytics suggest actions a business should take based on data insights.

Example - Recommending the best pricing strategy to increase profit.

10) Data Literacy

Data literacy is the ability to read, understand and work with data effectively.

Example - An employee interpreting charts to make decisions.

11) Data Measurement and Reporting

10) Structured Data

Structured data is organized in a clear format, usually in rows and columns.

Example - Data stored in spreadsheets or databases.

11) Unstructured Data

Data with no format.

Unstructured data does not have a fixed format and includes text, images or videos.

Example - Social Media posts or emails.

12) Data Warehouse

A Data Warehouse is a centralized system used to store large amounts of data for analysis.

Example - A company storing all its sales data in one system.

13) Data Mining

Data Mining is the process of discovering patterns and insights from large datasets.

Example - Finding customer buying trends.

14) Data Visualization

Data visualization presents data in visual formats like charts and graphs.

Example - A bar chart showing the business monthly sales.

15) Dashboard

A Dashboard is a visual display that shows key metrics in real time.

Example - A live sales performance screen can be a dashboard.

16) Metric

A metric is any measurable value used to track performance.

Example - Number of website visitors.

17) KPI / Key Performance Indicator

A Key Performance Indicator is a specific metric that is important for achieving business goals.

Not all metrics are KPI.

Example - Revenue growth as a KPI for a business.

18) Benchmark

A Benchmark is a standard used to compare performance.

A business uses a benchmark to see its performance.

Example -

Comparing your sales to industry averages.

20) Segmentation

Segmentation involves dividing customers into groups based on shared characteristics.

Example

Grouping customers by age or location.

21) Customer and Sales KPI

20) Conversion rate

The percentage of users who complete a desired action.

Example

5% of website visitors make a purchase.

21) Customer Acquisition Cost (CAC)

The cost of acquiring a new customer.

Example

Spending money / RSCD to gain a customer

20) Customer Lifetime Value (CLV)

A total profit a business expects from a customer over time.

A total amount a customer has spent on the business.

Example

A loyal customer spends R10,000 over several years

20) Churn rate

The percentage of customers who stop using a service. Turnover customers.

Example

10% of customers cancel subscriptions

20) Customer Retention Rate

The percentage of customers who continue using a service.

Loyal customers who always support the business.

Example

90% of customers stay subscribed.

20) Net Promoter Score (NPS)

A measure of customer satisfaction based on their likelihood to recommend.

Example

Customers rating a service 9/10

21) Average Order Value (AOV)

The average amount spent per transaction.

Example

Customers spend R300 per purchase

20) Sales funnel

Sales funnel are the stages a customer goes through before making a purchase.

Example -

Awareness - Interest - Purchase.

20) Marketing and Campaigning analytics.

20) Marketing Campaign

A planned set of marketing activities to promote a product.

Example

A social media advertising campaign.

20) Post Campaign Analysis

Evaluating the performance of a campaign after it ends.

Collecting data and facts after a campaign.

Example

Reviewing ad results to see what worked.
